

ABSTRACT OF THE DISCLOSURE

A communication system for use in connection with a stationary communication line which includes two input/output units, each input/output unit including a first connector for connection of a communication line, a second connector for connection of an input/output device, a rechargeable battery and a third connector for connecting a charging voltage to the rechargeable battery, whereby the units include transmitters and receivers for communicating a communication signal wirelessly in one direction from a first input/output unit to a second input/output unit and in another direction from the second input/output unit a communication signal for input to the communication line.
